SIGNificant e-Signature Enterprise Platform

Bizmatics, leader in EMR, PM and Medical Billing, offers biometric e-Signatures to its clients

Bizmatics, Inc., has significantly improved their client's productivity, quality and accuracy by implementing an electronic handwritten signature solution.

The integration of xyzmo solutions allow clinics to collect patient signatures on various consent forms directly in Electronic Medical Records saves time, effort and makes the office almost paperless.

Partner Profile

Bizmatics provides clinical and business productivity suites and services to the healthcare providers market. Major components of their solution set include Electronic Medical Records (EMR), Billing, Scheduling, and Patient Health Records via the online Patient Portal.

Bizmatics is a privately owned, profitable healthcare software and services company based in Silicon Valley, California. The company was founded in 2002. Bizmatics solutions are used by hundreds of medical professionals across the United States and the Caribbean.

Goals

The partner was looking to create a complete solution to integrate into its EMR system, where clinics can electronically collect multiple signatures, including patient and witness signatures for a variety of consent forms, and store them directly into the patient's medical record. This enables a complete fully paperless environment, making their existing process more efficient by avoiding the time-consuming task of having to collect signatures on paper, scan them and attach them to the patient charts.

Solution

To accomplish these goals, Bizmatics, Inc. decided to integrate xyzmo SIGNificant Solution. Now, the system creates a consent document along with the patient name and other details as a PDF file, with special signature tags. This is presented to the patient using the Significant solution. The patient can read the document on screen and then sign, using the signature pad. Once all signatures are collected, the document is converted into a PDF file that includes the patient signature and date-time stamp, and it is automatically attached to a patient's medical record. This document is the original and removes the need for paper copies or storage.

Benefits

- Signatures are collected electronically and attached to patient medical records, making the operation completely paperless.

- Saves time and money for the clinic; no scanning, attaching, shredding required.

- Avoids any manual errors.

About xyzmo SIGNificant

xyzmo's enterprise e-signature platform allows contracts, agreements, forms, or any document that requires a signature, to be signed electronically on signature pads, payment terminals, iPad, Android devices, etc with digital certificates or online via 'click-to-sign'. Signing and stamping remain as understood as ever, but are performed directly in the electronic document and can be integrated with any existing application or document workflow procedures. It could not be easier or more secure.

xyzmo is one of the world's most complete, open and signature-pad-independent electronic signature software companies. xyzmo SIGNificant is a private company based in Ansfelden, Austria, with close cooperation with strategic partners is represented in many other countries including now the UK.
